

QA AUTOMATION ENGINEER

SOFTWARE DEVELOPMENT | LA PLATA

Are you into developing automated tests and applying processes for new and existing products? We are looking for a new team member who cares about best practices and is able to identify, record, document and track bugs, optimizing the work flow and quality of our deliverables.

WHAT YOU'LL BE DOING

You'll be part of a team, which will be developing integrated modules. Following and enforcing our best practices. Working side by side with our clients in a highly challenging environment.

YOU'LL BE IN CHARGE OF

- # Develop automated tests
- # Reviewing quality specifications and providing useful feedback
- # Creating detailed and well-structured test plans and cases
- # Performing detailed regression testing when bugs are resolved
- # Estimating, prioritizing, planning and coordinating quality testing activities

REQUIRED SKILLSET

- Strong technical background
- Cucumber-java selenium knowledge
- Experience with REST API automation
- Good English writing skills and ability to maintain an ordinary conversation

MORE ABOUT YOUR PERSONALITY

- # Passion to learn and make things work
- # Fast learner
- # Communication and interpersonal skills

NICE TO HAVE SKILLS

- # Experience in back-end development
- # Performance testing, Jmeter
- # Experience in JavaScript or Python

You fancy flat hierarchy and direct communication? You share [our values and visions](#)?
Send your application to contribute to our team and enjoy our unique work culture!
